🌡 Tab 8 — Weather vs Pollution ★ NEW

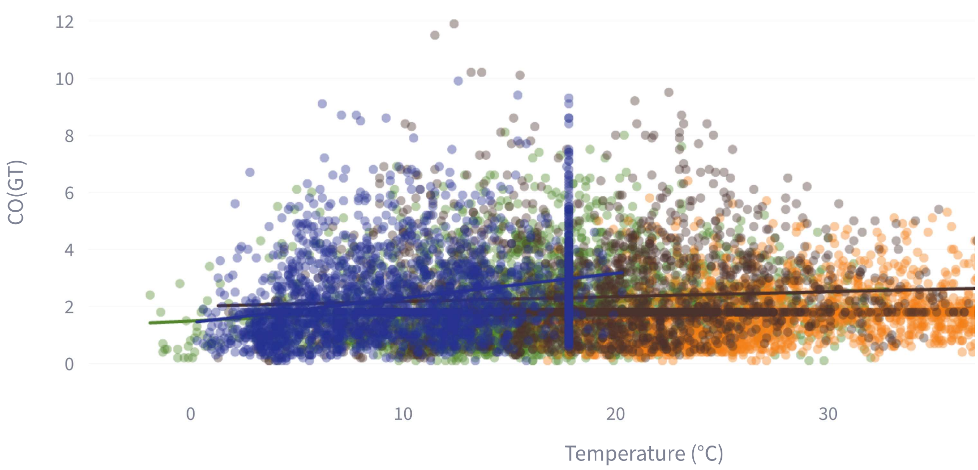
ℹ️ Temperature, Relative Humidity, and Absolute Humidity — how do they influence pollution levels?

Select pollutant:

CO(GT)

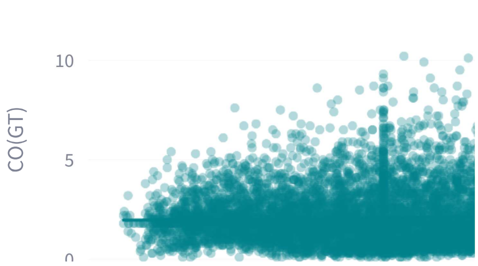
🌡 Temperature vs CO(GT)

Temperature vs CO(GT) (coloured by Season)



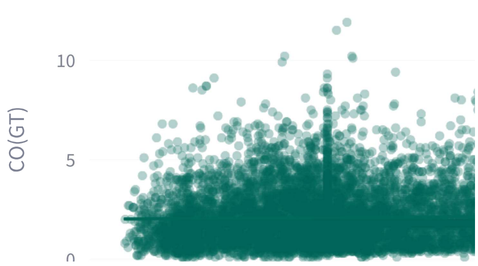
💧 Relative Humidity vs CO(GT)

RH vs CO(GT)

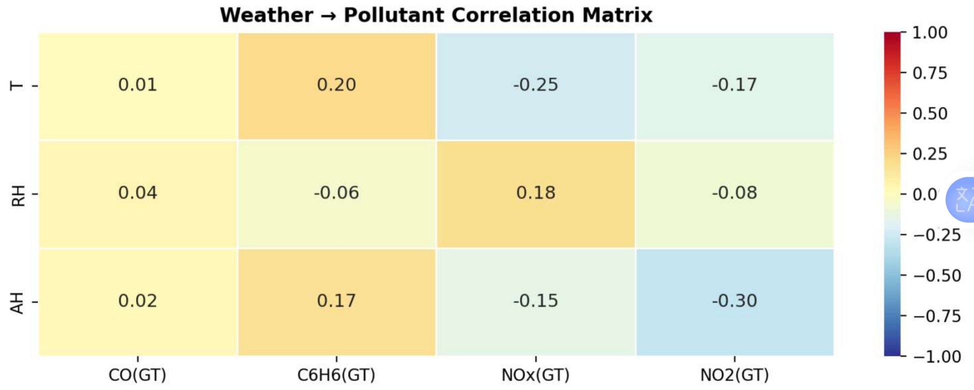


🌊 Absolute Humidity vs CO(GT)

AH vs CO(GT)



📊 Weather Correlation with All GT Pollutants



✅ Temperature (T) negatively correlates with CO and NOx — cold air creates thermal inversion, trapping pollutants near ground level.

✅ Relative Humidity (RH) shows mild negative correlation — rain washes particles from air, reducing concentrations.

⚠️ Absolute Humidity (AH) behaves similarly to RH — both are proxies for wet/warm conditions that aid pollutant dispersion.
