Tab 3 — Bivariate Analysis

i Key insight: GT sensors vs metal-oxide sensors — how well do proxies track real pollution?

CO(GT) by Hour of Day

Average CO(GT) by Hour

✓ Metal-oxide sensors (PT08.S1) correlate strongly with ground-truth CO ($r > 0.85$) — they are reliable proxies.

✓ Rush hours (7–9 AM, 5–7 PM) show clearly elevated CO — traffic is the dominant emission source.

⚠ Temperature shows a negative correlation with CO — cold nights trap pollutants near ground (inversion effect).
