Tab 7 — Pollutant Time Trends ★ NEW

 This tab explores how pollutant concentrations change over time — by hour, day of week, month, and season.

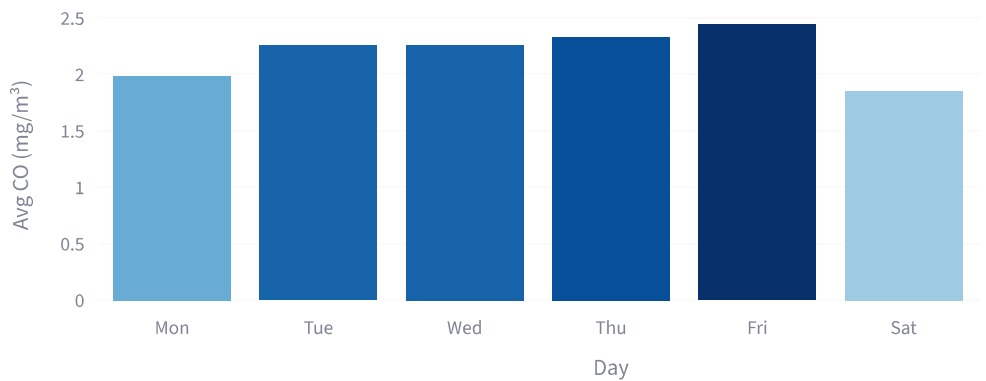

Average Pollutant Level by Hour of Day

Hourly Pollution Profile — Rush Hour Peaks Visible

Average CO(GT) by Day of Week

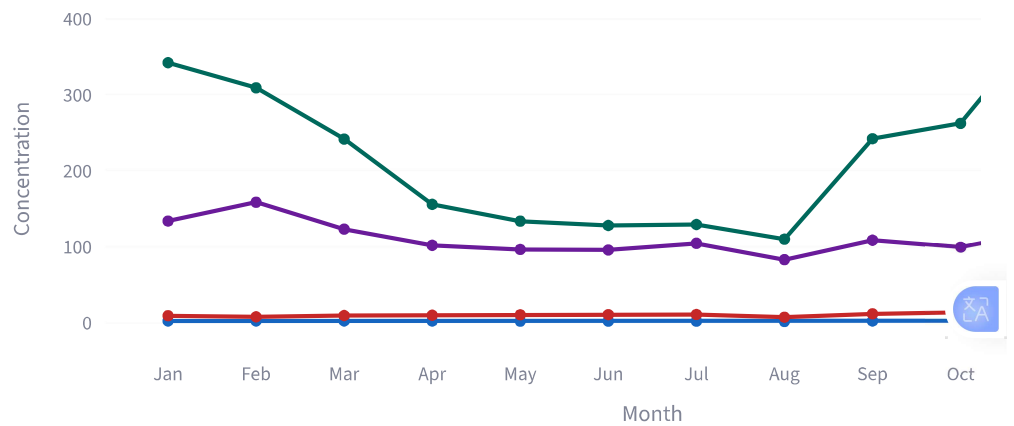

Average CO by Day of Week

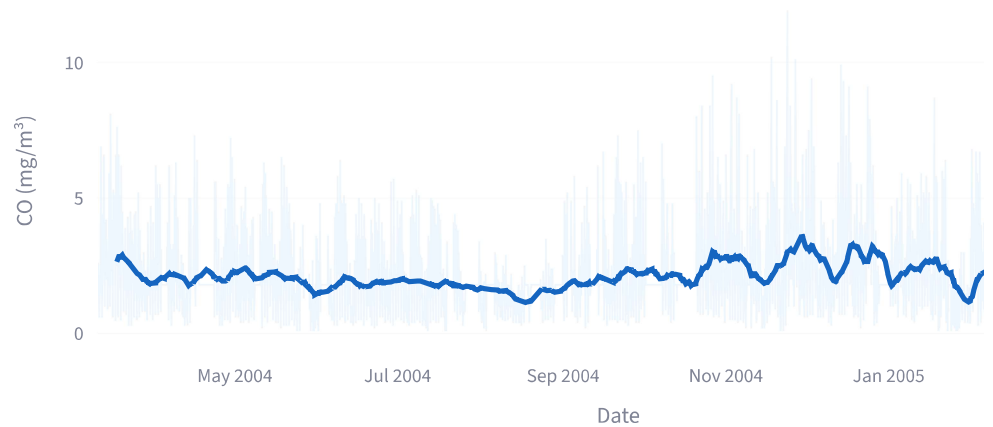

Monthly Pollution Trend

Monthly Average — All GT Pollutants

Rolling 7-Day Average CO(GT)

CO(GT) — Hourly + 7-Day Rolling Average

Clear AM (7–9h) and PM (17–19h) rush hour peaks confirm traffic as the dominant CO source.

Weekdays show 20–30% higher CO than weekends — business traffic drives urban pollution.

Winter months (Oct–Jan) show highest pollution — reduced atmospheric mixing + heating combustion.

⚠ Summer months show lowest CO — higher temperatures improve vertical mixing and pollutant dispersion.
